Introducing the world's first Wireless High Resolution Audio Player. Based on the innovative Wireless Speakers and Audio (WiSA) standard, the Sharp Wireless High Resolution Audio Player (SD-WH1000U) can simultaneously transmit 7.1 channels of digital audio. Listeners can hear audiophile-quality (24-bit/96kHz) uncompressed audio without cables or wires, which can degrade a signal. You can access your entire media library through the Sharp Player, which comes equipped with a SACD and Blu-ray disc drive and supports an extremely wide variety of media types and file formats. The player can access files on a hard drive (via USB) and it can also connect to a home network to access files. Navigation and content control are seamless via Sharp mobile app. High quality audio signals from the player can be transmitted to any WiSA-compliant speakers, or to any traditional passive speaker via the Sharp Wireless Bridge (VR-WR100U). The player also transmits uncompressed Full HD video to your TV wirelessly using the Wireless HD (WiHD) standard and an included adapter.
